IBM **Cloud**
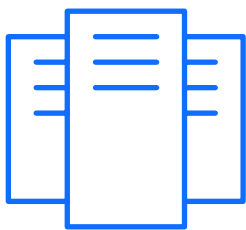

It's your data, your insight, your cloud.
We built the infrastructure. You build your business on it.
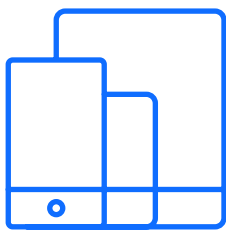

OUR PLATFORM

Data Centers

Each is built and equipped with the same servers and services to provide consistent performance wherever your data resides.

Network

Data travels quickly and securely when segmented appropriately across our global network backbone of public, private, and management networks.

Control

Monitor and control your cloud's when, where, and how with a single management system and API through our web portal and mobile apps.

CUSTOMIZE & PROVISION YOUR CLOUD

Servers

Bare Metal (Dedicated) Servers | Raw horsepower for intensive workloads

Virtual Servers | Flexible, scalable cloud compute resources

Software | Comprehensive library of OS, virtualization & DB options

Security

Software | Intrusion protection, detection & prevention software

Firewalls | Shared, dedicated & high availability security appliances

SSL Certificates | Security against unauthorized data interception

Compliance | Extensive controls, reports, audits & certificates

Networking

Load Balancing | Local, global & high availability load balancers

Network Appliances | Software-defined, all-in-one networking solutions

Direct Link | Secure, private connectivity to on-premises resources

Domain Services | Registration & administration of top-level domains

Storage

Block Storage | Powerful iSCSI-based storage with SAN persistence

File Storage | Durable NFS-based storage in a NAS environment

Object Storage | Scalable object storage based on S3 architecture

Backup | Reliable automated backup services from Evault & R1Soft

Content Delivery Network | Global network of nodes to distribute content

Developers

API | Granular systematic access to all IBM Cloud Services

Email Delivery | Email services with superior delivery rates & analytics

Digital Transcoding | Convert audio or video assets into various sizes & formats

SL Development Network | All the API information you need

Management

Controls | Single set of controls via API, web portal, or mobile application

Monitoring & Reporting | Standard & advanced options

Management Tools | Streamline & automate complex processes

Managed Hosting | Unparalleled 24x7 management of core services

Support | Unlimited access to technical experts at no additional cost

In addition to these IBM Cloud infrastructure offerings, the IBM Cloud portfolio includes the platform services, video capabilities, management services, and storage options to give you a competitive advantage in the cloud.
